

PATENT-PENDING TECHNOLOGY

# NOMICU<sup>®</sup> L-100

a new generation of highly bioavailable curcumin

Curcumin is an organic chemical compound (polyphenol) which constitutes the most phytochemically active curcuminoid found in the turmeric rhizome (*Curcuma longa* L.)

Curcumin is a very strong anti-inflammatory and antioxidant agent whose properties had been used in the traditional Far Eastern Medicine for thousands of years.

The results of clinical studies conducted worldwide have confirmed a high clinical potential of curcumin in supportive, combinatory anti-cancer therapies as well as treatment of Alzheimer's disease, arthritis and depression.

Curcumin was also found to significantly boost the metabolism of toxic acetaldehyde after ethyl alcohol consumption.

A very low bioavailability of the native form of curcumin and its very poor water solubility causes significant limitations to its use in pharmaceuticals, nutraceuticals and beverages.

The curcumin formulation developed by Nomi Biotech Corporation allows to overcome these limitations.

## NOMICU<sup>®</sup> L-100 a new generation of curcumin

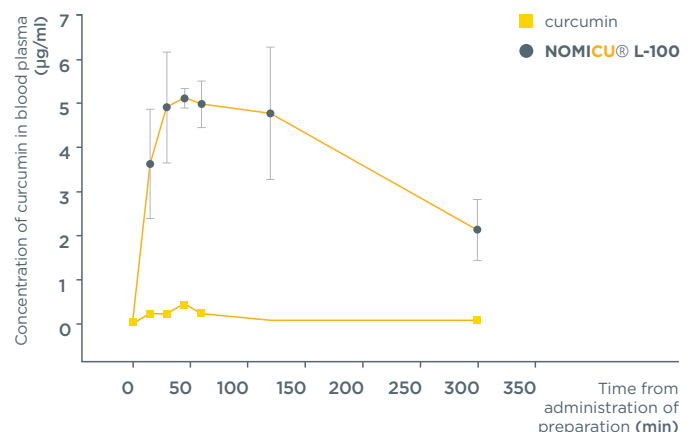

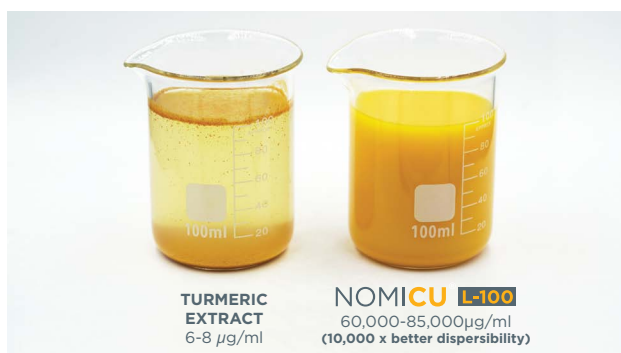

Thanks to a very close collaboration between Nomi Biotech Corporation's team of biotech engineers and experts from the National Medicines Institute we have successfully developed a highly bio-available, water-dispersible formulation of curcuminoids for use in nutraceuticals, dietary supplements and beverages.

**NOMICU<sup>®</sup> L-100** contains a very high concentration of curcuminoids (25%-30%), which makes it stand out from other market formulations of curcumin.

**NOMICU<sup>®</sup> L-100** is very versatile and can be used in many different final formulations (dietary supplements). That is because of the use of a safe, well-researched and tested supplementary ingredients permitted in the food sector. **NOMICU<sup>®</sup> L-100** can be applied to both solid forms (tablets, capsules) and to liquid forms (drinks, concentrates, drops, etc.)

**NOMICU<sup>®</sup> L-100** is the only curcumin formulation in Europe undergoing a complex certification process by the National Medicines Institute.

*Pharmacokinetics in blood plasma after administration of curcumin in a dose of 0.2g/kg MC (model: Mus musculus L.)*

a new generation of highly bioavailable curcumin

## Nutraceutical Applications

(Health claims from a PENDING LIST of the European Food Safety Authority - EFSA):

Curcuma longa contributes to normal psychological function.

Curcuma because of curcuminoids content:

- contributes to the normal function of the immune system.
- contributes to normal lipid metabolism by the liver.
- contributes to normal function of joints.
- contributes to normal function of the liver.
- contributes to the maintenance of normal skin.
- contributes to the protection of cells from oxidative stress.
- contributes to the normal function of the heart.
- contributes to the normal function of the respiratory system.
- contributes to normal function of joints and bones.
- contributes to normal function of the liver.
- contributes to normal functioning of the nervous system.
- contributes to the protection of cells from oxidative stress.

## Final use or product applications::

Dietary supplements, beverages

## Recommended Dosage:

**For capsules:** Up to two "0" size capsules (360 mg each) which corresponds to 200 mg of curcuminoids (186 mg of curcumin) - per day (orally)

**For liquid forms:** 250 mg per serving (bottle/shot). Up to 3 servings - per day (orally).

## Form Of Supply:

Standardized powdered extract in a water dispersible form

## Shelf Life:

24 months from the production date

## Product suitable for VEGAN's:

**Product DOES NOT CONTAIN anti-caking agents!**

## Strategic research partner:

National Medicines Institute

## About the NOMICU<sup>®</sup> L-100 manufacturer

Nomi Biotech Corporation is a Polish-Japanese biotech company co-financed by the National Centre for Research and Development. The company specializes in research and development, as well as design and manufacturing of innovative nutraceuticals for contemporary consumers.

The core scientific team is made up of molecular biologists and cytogeneticists with extensive expertise and experience in R&D projects. The company operates internationally and collaborates with Japanese and Taiwanese biotech companies in the scope of acquiring active ingredients of plant origin with the highest degree of quality.

Our strategic scientific partner is the National Medicines Institute - <http://www.nil.gov.pl/en/>

We are a laureate of the "Fast Track" programme of the National Centre for Research and Development.

Nomi Biotech Corporation was also a finalist of the prestigious "Start-up of the Year" contest held as part of the European Start-Up Days 2019 in the BIOTECHNOLOGY category and "Rising Star" contest during the 19th BEF Forum in Basel, Switzerland.
